Bugs, feedback, testing and retesting

Bugs and feedback (tasks tagged bug or feedback), testing work and the retest queue. The Bug or Feedback filter narrows the page.

QA, as you see it (names replaced).

Every data point

DATA POINT	WHAT IT SHOWS AND HOW TO USE IT
Issues filed	Every task tagged bug or feedback in the filters, whoever it is assigned to. Bug and Feedback under the number. Click any count to list those tasks below.
Tasks in hand	The QA Testing team's pending testing tasks whose deadline is still ahead (IST), by when they are planned: tomorrow, the rest of this week, the rest of this month, next week, next month. The parts overlap, so they do not add up. Click the tile for the planner: day, week or month columns per person (with the projects they work on) or per project (with who works on it), overdue first in red.
Tasks in hand by assignee	The testing team's pending tasks with the deadline ahead, per assignee or project. The chart shows the window picked above it; the table shows every window. A bar or count opens those tasks; a name sets the filter.

Open / pending	Open = pending: any stage behind QA Backlog except On Hold (Issue Raised included). Resolved = QA Backlog, In QA, Done or LIVE. On Hold is its own tile. The ring shows the resolved %. Unassigned: those of them nobody has picked up yet (the placeholder assignee); click to list them.
On hold	In On Hold: neither pending nor completed. Pending + completed + on hold = total.
Last filed and resolved	Latest day an issue was created, and how many that day. Click for that day by project: open a project for who filed its issues (bug and feedback), and a creator for who they went to. Next to it, Last resolved: Latest day issues were pushed to QA Backlog (a fix handed to QA), and how many that day.
Rework	Issues QA sent back after testing: from QA Backlog, In QA or Done to Issue Raised, To do or In progress. Stage flow only.
Retesting awaited	Every task waiting for QA: in QA Backlog or In QA, split into dev tasks and issues (bug or feedback). The QA team's queue.
Issues by person	Open vs resolved, each split into bug and feedback (or the reverse), per person or project. Table: the assignee-wise table. Click the title to focus it in the centre; drag ⠿ at the top to move it.
Rework by developer	QA send-backs per person or project, split into bug and feedback, and the % of their issues sent back. First Issue Raised to To do is not counted.
Testing tasks	Tasks tagged testing or re-testing, or assigned to QA Testing. Late = pending past deadline. A testing or re-testing task in Issue Raised is "Issue raised": not pending, never late.
Waiting for retest	Issues in QA Backlog or In QA, by who filed them. Oldest = days waiting.
Retest queue by person	Tasks and issues in QA Backlog and In QA per assignee or project. Every number opens its tasks.
Issue trend	Last 7 days (IST): bugs and feedback filed (created, light) and resolved (pushed to QA Backlog that day, dark). Pick one assignee or project, or see all. Click a point for that day's issues.
Issue ageing	Open issues by days past deadline (same as task ageing). On Hold counts here.
Issues by stage	Issues per stage and person (or project). Red = overdue part. Bug / Feedback narrows it.
Issue lists	Latest filed, Latest resolved and All issues. Any number above opens All issues narrowed to it. Edit in place, bulk edit and Excel export work as on Development.

Issue lists

Latest filed, Latest resolved and All issues (follows the last number you clicked), with the same editing and export as on Development.
