01 Welcome

What the dashboard is for

The Nural Dev and QA Dashboard shows the work of the whole company in one place, live from Bitrix24: tasks, deadlines, bugs and feedback, testing, and how projects and people are doing. Nothing has to be copied in by hand. A change made in Bitrix24 reaches the dashboard within seconds, and a change made on the dashboard is made in Bitrix24, in your name.

For management

KPI: open and overdue work, what was closed, on-time delivery, project health, workload and the people table, with insights worked out for you.

For development

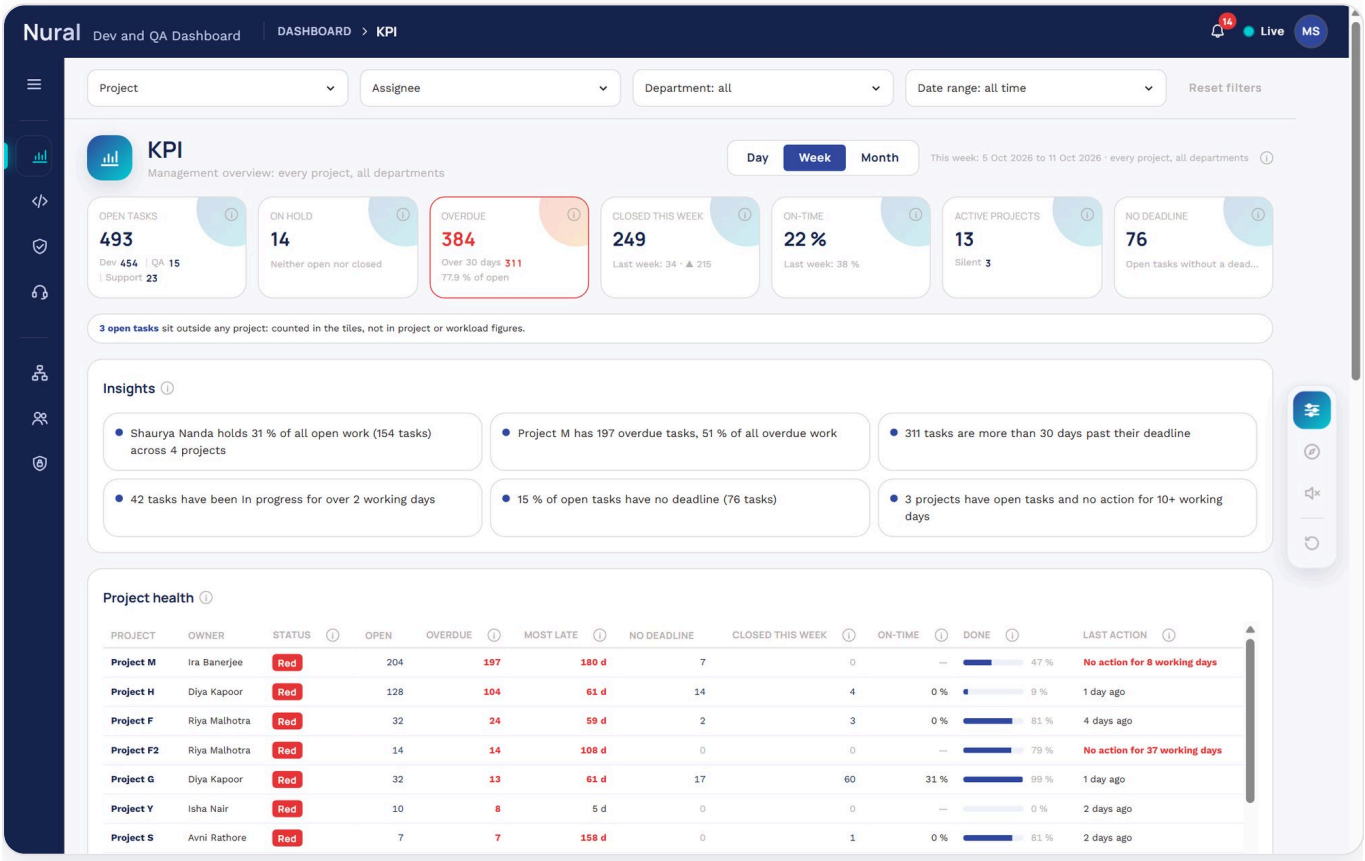

What is due today, what is overdue, what has gone to QA, per person and per project, and every task one click away.

For QA

Bugs and feedback filed and resolved, rework, the retest queue and the testing team's workload.

For support and admins

The Support tab (coming soon, built from your feedback), the company tree, the people directory and access permissions.

The KPI page: the menu on the left, page tools on the right.

02 Signing in

Your Bitrix24 account is your key

Open the dashboard and choose **Sign in with Bitrix24**. Use your Nural Bitrix24 account; the dashboard never sees your password. Only active people of the Nural portal can sign in.

- You stay signed in for **3 days**. Then the dashboard shows *Your session ended*; sign in again from there.
- **Sign out** is in your profile menu (your initials, top right).
- If a change to a task says Bitrix24 refused it, sign out and in again so the dashboard picks up your Bitrix24 permissions.

> **After an update** A toast says a new version is ready and lists what is new. Click **Refresh** to get it.

03 What you can see and do

Your role and rights

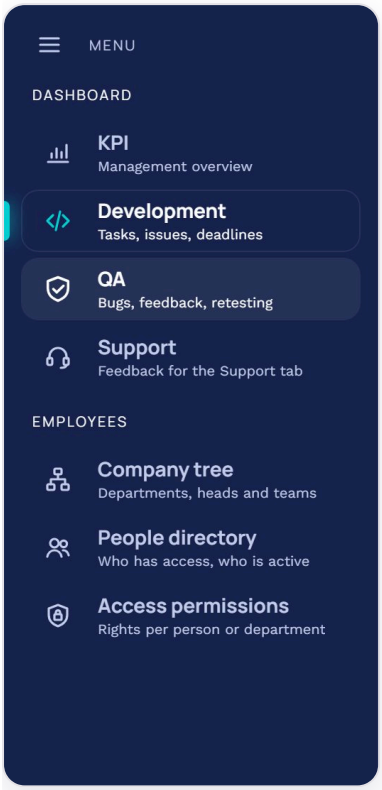

What you see depends on your rights. Admins set them per person or per department (Access permissions); until they do, your role decides.

ROLE	DATA	PAGES	CAN CHANGE ON TASKS
Admin	Everything	All, including Access permissions	Every field
Project manager, team lead	Everything	KPI, Development, QA, Support, Company tree, People directory	Every field
Product owner	Everything	KPI, Development, QA	Every field
Member	Tasks assigned to them or created by them	Development, QA (and Support for the Tech Support team)	Stage, status and tags

Members Every number, list, chart and export counts only your own tasks: those assigned to you or created by you.

04 Finding your way

Menu, top bar and page tools

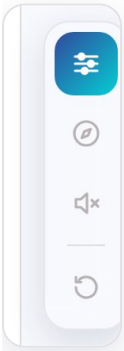

The menu sits on the left. Closed, it shows icons; hover it to open it, and move away to close it. Click ☰ to pin it open until you click again.

Dashboard: KPI, Development, QA, Support.
Employees: Company tree, People directory, Access permissions (for those with the right).

A teal dot on an icon means something new is there.

The top bar

- **Where you are**: e.g. Dashboard › QA.
- **Alerts** (bell): overdue tasks and tasks stuck over 5 days in one stage; click for the list.
- **Live**: green when updates are flowing in from Bitrix24.
- **Profile**: your name and role, the theme (Light, Dark, System), live-update toasts and Sign out.

Page tools float on the right, as icons; hover any icon for its name.

Customise: choose the tiles and cards to show.
Guided tour: a walk through the page.
Voice: read tours aloud.
Reset layout: back to the default, with Undo.

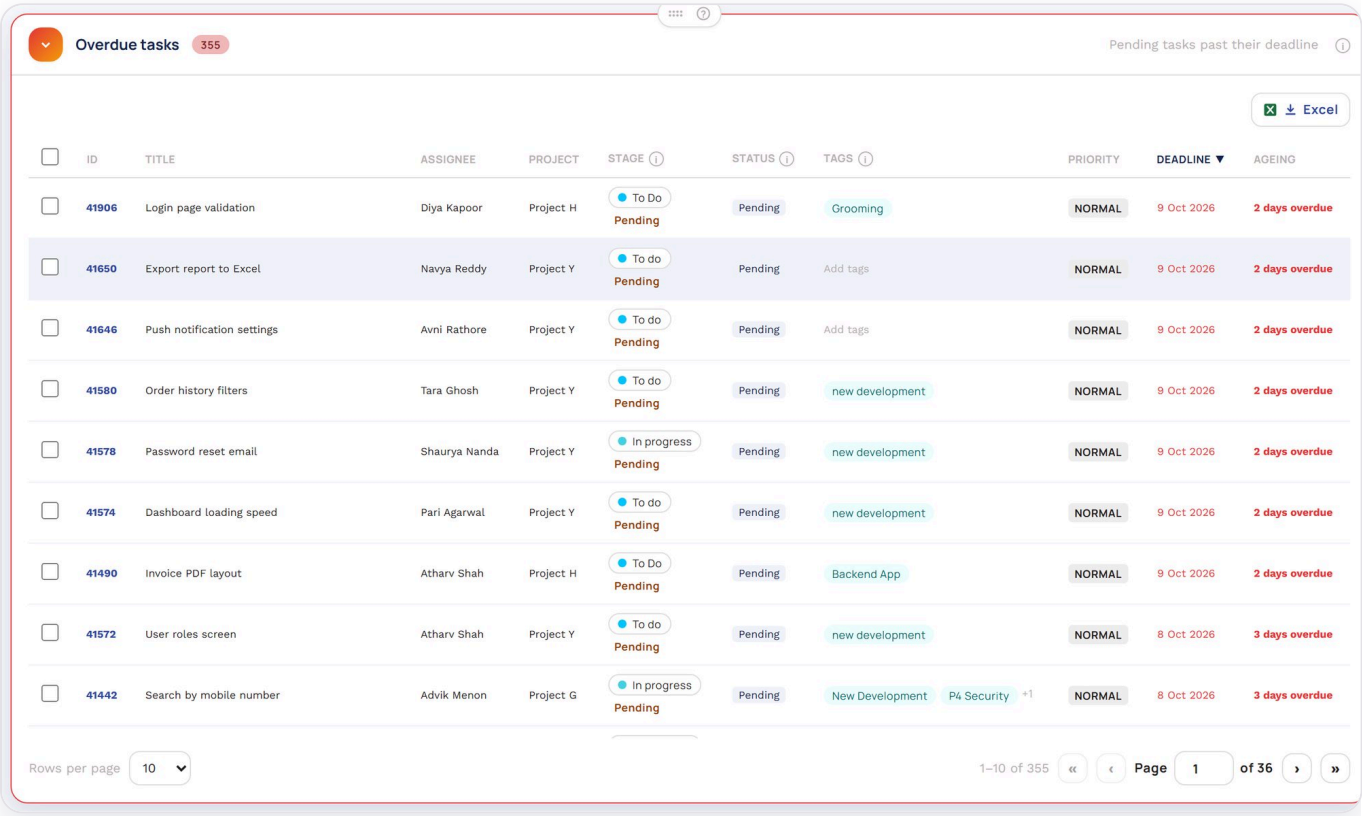

05 Reading the numbers

Tiles, cards, filters and drill-downs

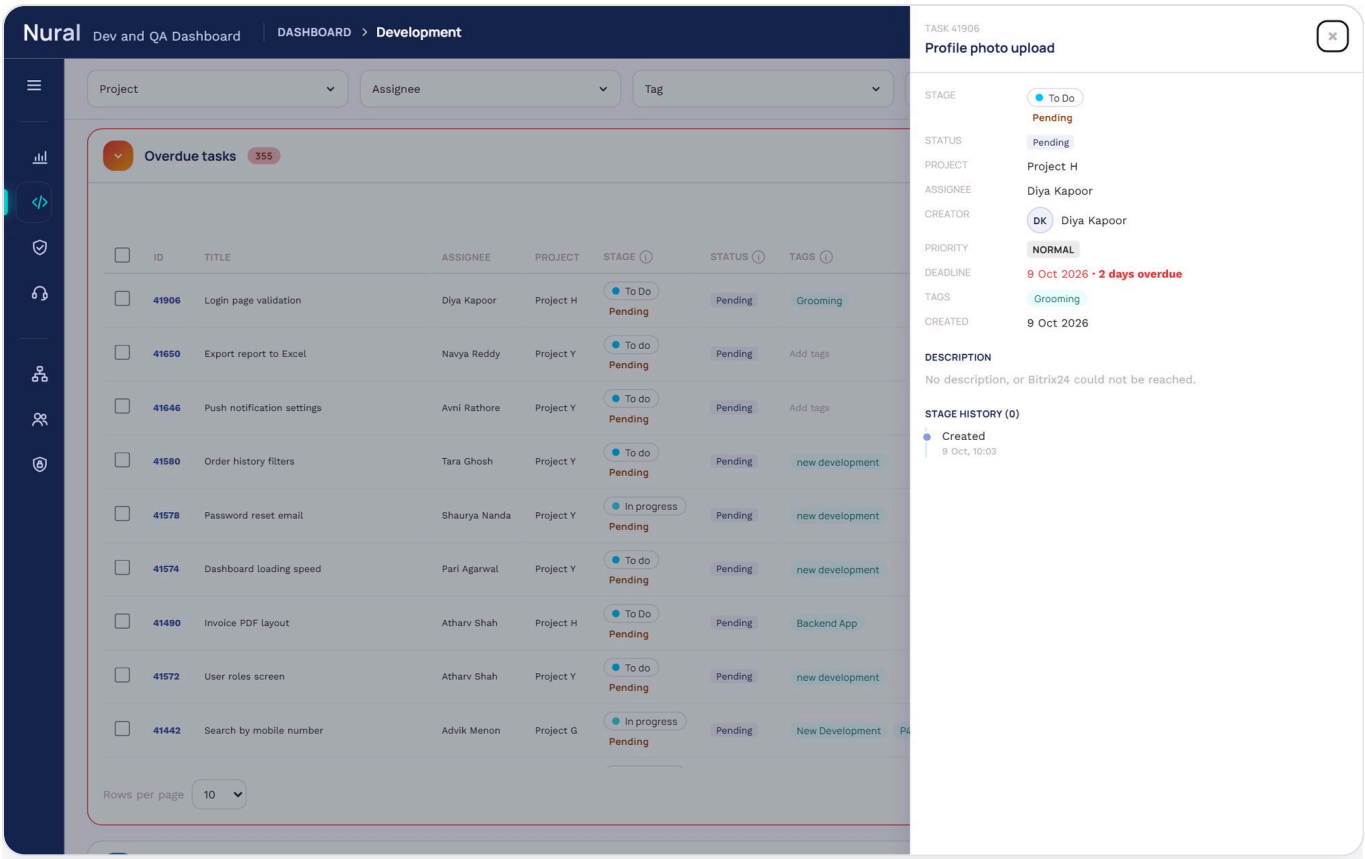

Tiles: one number each, split into parts (e.g. Dev and Issues). Click a tile or a part to list its tasks.

- **Filters** under the top bar (project, assignee, tag or bug/feedback, date range) narrow every number on the page. **Reset filters** clears them.
- The **i** next to any number says exactly what it counts, and what your filters cover.
- **Click any number**, bar or cell to see the tasks behind it. The list below opens, narrowed to that number.

A task list: sortable columns, edit in place, tick boxes for bulk edit, Excel export and pages of 10 to 100 rows.

Clicking a task opens its view: every detail, the description and its history, with Open in Bitrix24.

06 Changing tasks

Edit in place and in bulk

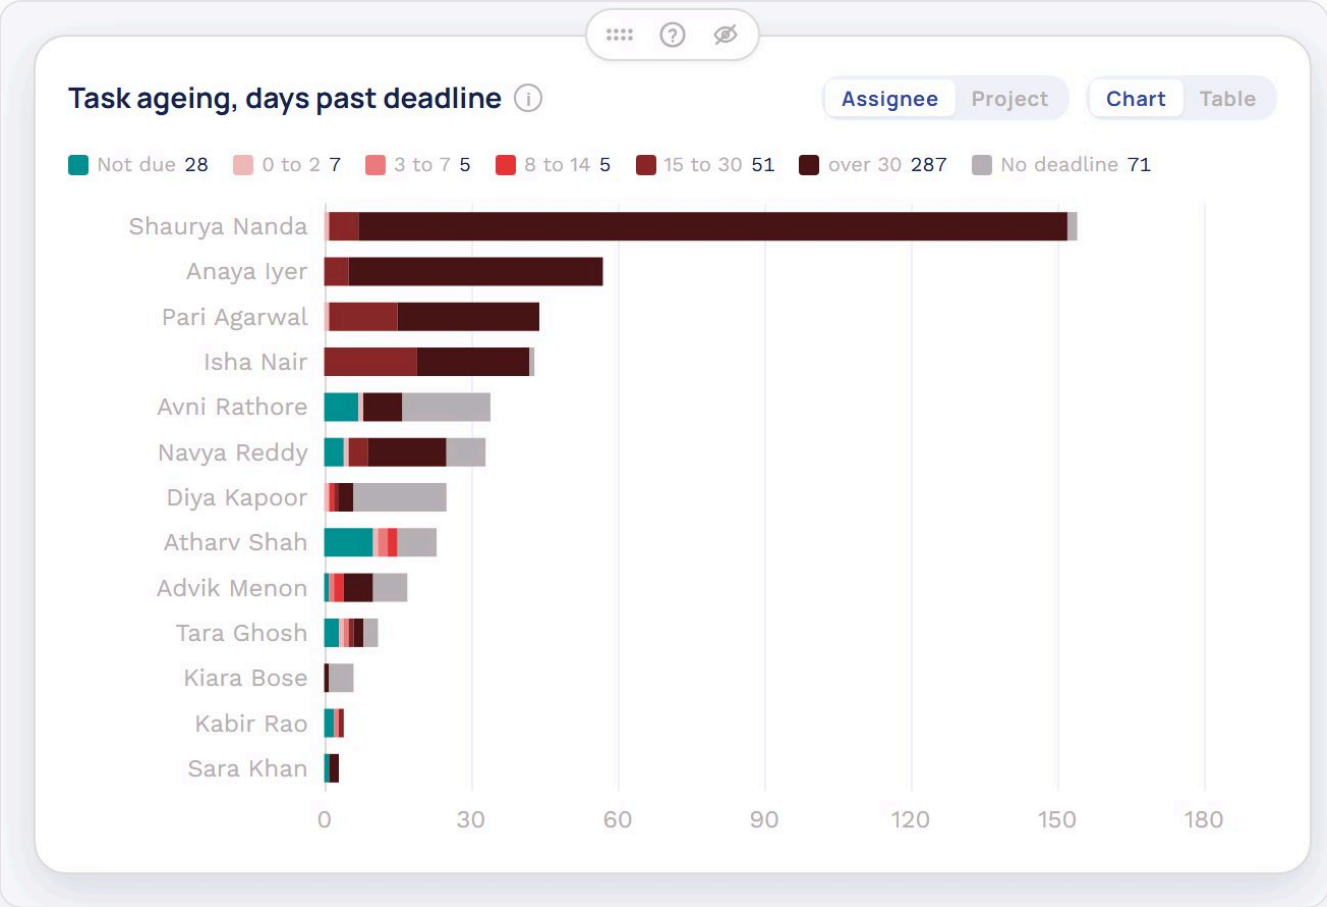

Changes are made in Bitrix24, in your name, and show on the dashboard straight away.

- **Edit in place**: click a Stage, Status or Tags cell (or a fact in the task view) and pick the new value. Team leads, PM and admins also change Project, Assignee, Priority and Deadline (future dates only).
- **Bulk edit**: tick rows (or the header box for the whole list), choose what to change, then **Check**. Rows that cannot take the change turn red with the reason; **Apply** changes the rest. Up to 100 tasks at a time.
- **Excel**: every list downloads as it is filtered and sorted.

> **Bitrix24 decides.** If Bitrix24 refuses a change (for example, no rights on that task), the dashboard says why and nothing changes.

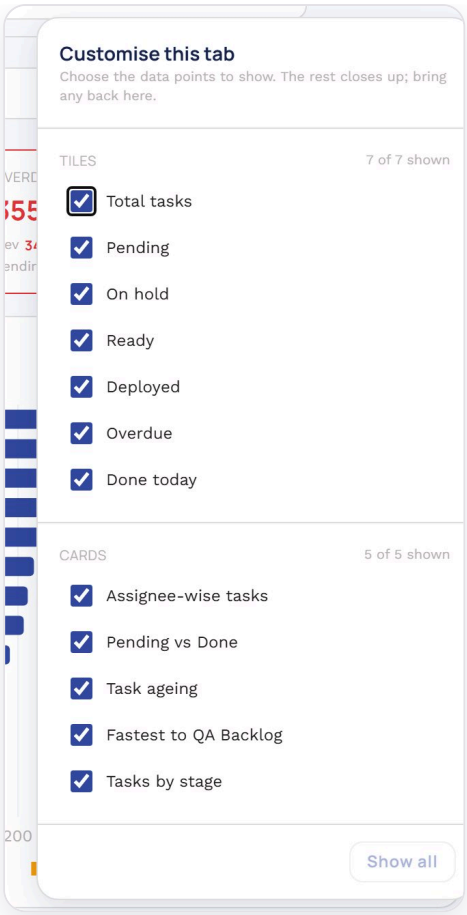

07 Make it yours

Arrange, hide, focus and export

Hover any tile, card or list: ⠿ moves it, ? explains it, the eye hides it.

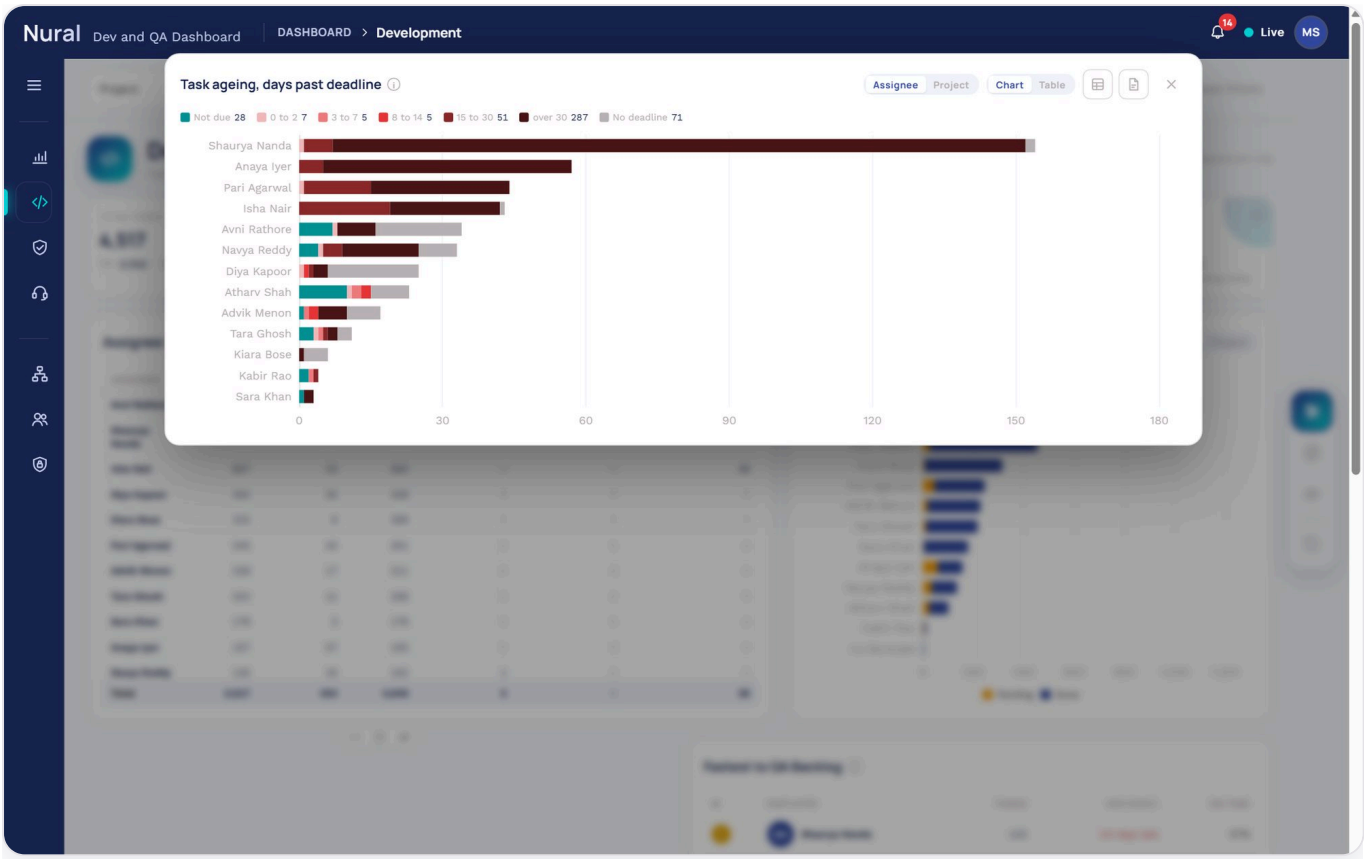

- **Drag** by ⠿ to put tiles, cards and lists in your order. Each stays in its own group, and cards resize to fill their row: drop a half-width card next to a full one and both become half.
- **Hide** a tile or card with the eye; bring it back with **Customise**. Task lists cannot be hidden.
- Your layout is saved for you and follows you to any computer. **Reset layout** puts everything back.

Customise: tick the tiles and cards to show on this page.

Focus view and export

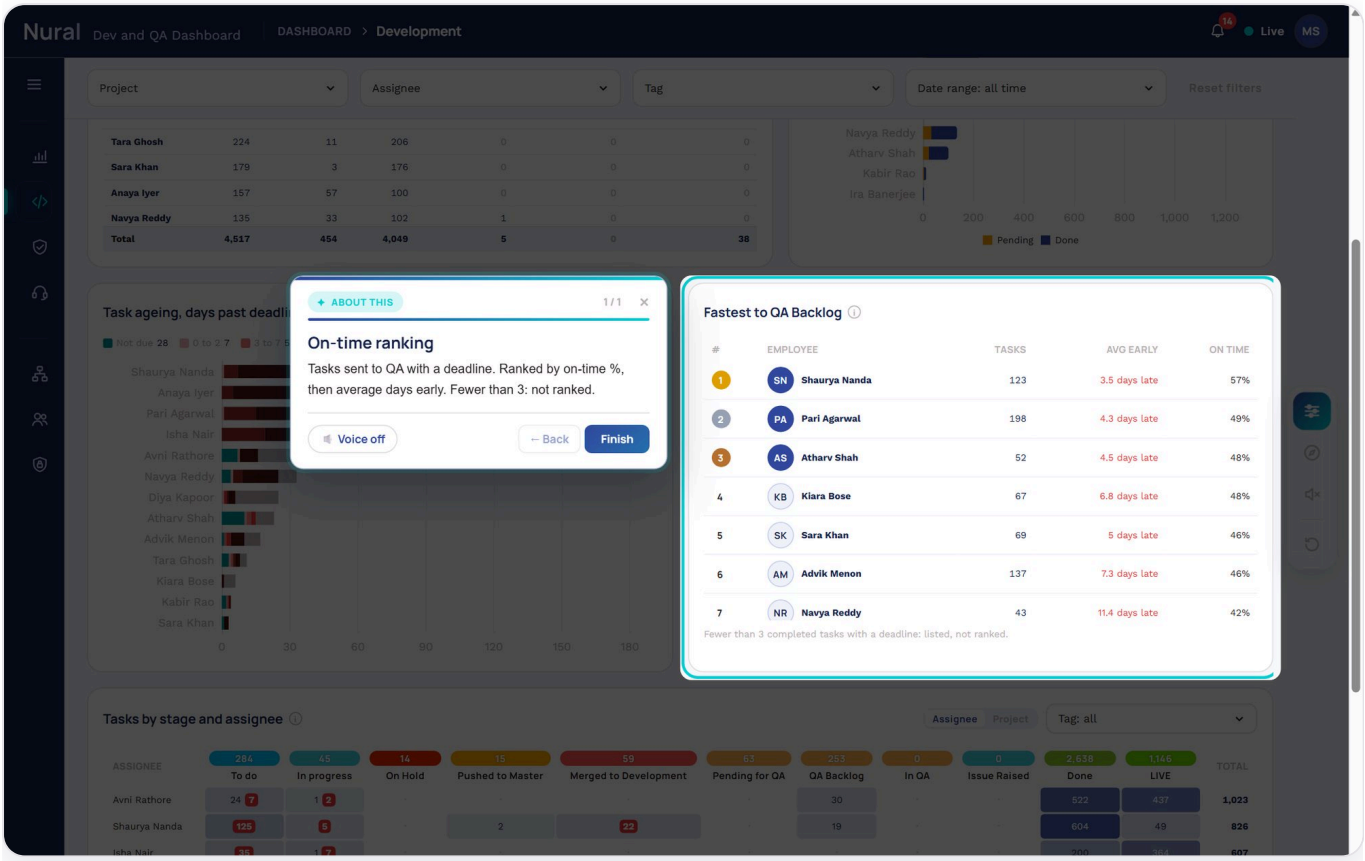

Click a card's title (or an empty part of it) to bring it to the centre, larger, with the page blurred behind. Then **Excel** exports that card's data, and **PDF** saves a picture of the whole card with the filters and time on it. Press Escape or click outside to put it back.

Focus view: one card in the centre, with Excel, PDF and close.

08 Guided tour and what's new

Let the dashboard show you around

A tour bubble next to the part it explains, with a step count, Back / Next and Voice.

- On your **first three sign-ins** each page explains itself when you open it: your role first, then every tile, card and list you can see. The last step offers the next page.
- Any time: the **Guided tour** icon on the right, or **?** on a single data point.
- **Voice**: turn it on to hear each step read aloud (browser voice; Edge sounds most natural).
- **What's new**: after an update, the refresh toast lists the changes, the page with something new gets a dot, and opening it walks you through.

09

The pages at a glance

See the Module guide for every data point

KPI

The management overview: open, on hold, overdue, closed, on-time, active projects, no deadline; insights, project health, overdue breakdown, workload, people and activity. Day, Week or Month.

Development

The Development department's tasks and issues: totals, pending, on hold, ready, deployed, overdue, done today; per person or project, ageing, ranking and stages; task lists and alerts.

QA

Bugs and feedback: filed, open, on hold, last filed and resolved, rework and retesting awaited; by person, rework, testing workload, retest queue, trend, ageing and stages.

Support

Coming soon. Tell us what the Support tab should show; your answers shape it.

Company tree

Departments as in Bitrix24, with heads and people.

People directory

Everyone's designation, department, access areas, dashboard status, last active, and open and overdue tasks.

Access permissions

Admins set each right per person or department; every change is logged.

10 Help

Common questions

A number looks different from Bitrix24

Check the filters at the top and the switch (All, Dev, Issues); the **i** says what each number counts. Members see only their own tasks. Changes arrive within seconds; if Live is not green, refresh.

I cannot change a task

Members change stage, status and tags; other fields are for team leads, PM and admins. If Bitrix24 refuses, the message says why. Signing out and in again picks up new Bitrix24 permissions.

I was signed out

Sessions last 3 days from sign-in. Sign in again from the page that opens.

A page or tab is missing

Pages follow your rights. Ask an admin if you need more access.

My layout looks odd

Use **Reset layout** in the page tools on the right.

> **Still stuck?** Use the Support tab to tell us, or ask a dashboard admin.
