01 Welcome

What the dashboard is for

The Nural Dev and QA Dashboard shows work in one place, live from Bitrix24: tasks, deadlines, bugs and feedback, and how things are going. A change made in Bitrix24 reaches the dashboard within seconds, and a change made on the dashboard is made in Bitrix24, in your name.

This guide is for **support team**. Every number, list, chart and export counts **only your own tasks**: those assigned to you or created by you. It covers the pages you can open: Development, QA, Support, Insights, Feedback, Documents, FAQs.

The Development page as you see it: the menu on the left, page tools on the right (names replaced).

02 Signing in

Your Bitrix24 account is your key

Open the dashboard and choose **Sign in with Bitrix24**. Use your Nural Bitrix24 account; the dashboard never sees your password.

- You stay signed in for **3 days**. Then the dashboard shows *Your session ended*; sign in again from there.
- **Sign out** is in your profile menu (your initials, top right).
- If a change to a task says Bitrix24 refused it, sign out and in again so the dashboard picks up your Bitrix24 permissions.

> **After an update** A toast says a new version is ready and lists what is new. Click **Refresh** to get it.

03 What you can see and do

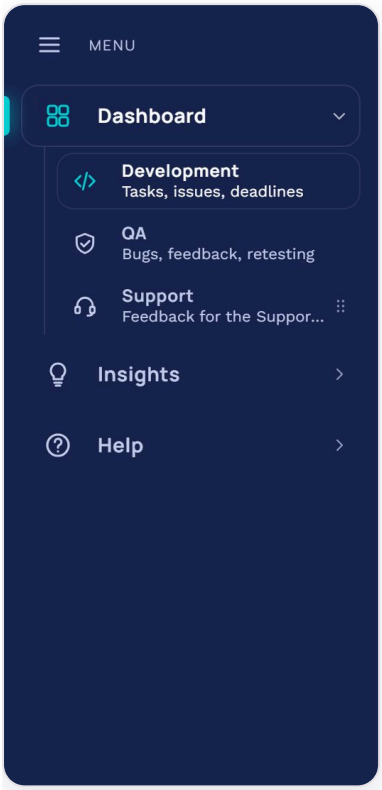

Your access

As a member of the Tech Support team you open Development, QA, Support, Insights, Feedback, Documents, FAQs. Every number, list, chart and export counts **only your own tasks**: those assigned to you or created by you. You can change the stage, status and tags of your tasks.

> **Rights can change.** Admins can widen or narrow anyone's access per person or per department; the menu always shows exactly what you can open.

04 Finding your way

Menu, top bar and page tools

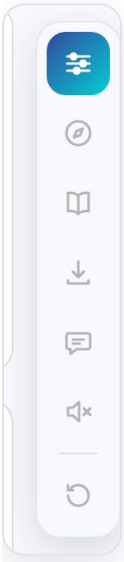

The menu sits on the left, by module, each with its icon. Closed, it shows icons; hover it to open it, and move away to close it. Click ☰ to pin it open. The module of the page you are on is highlighted and open; click another module to open it. Drag ⠿ to put modules, and pages within their module, in your order.

Dashboard: Development, QA, Support.
Insights: My insights.
Help: Feedback, Documents, FAQs.

A teal dot on an icon means something new is there.

The top bar

- **Where you are**: e.g. Dashboard › QA.
- **Alerts** (bell): overdue tasks and tasks stuck over 5 days in one stage (yours); click for the list.
- **Live**: green when updates are flowing in from Bitrix24.
- **Profile**: your name and role, the theme (Light, Dark, System), live-update toasts and Sign out.

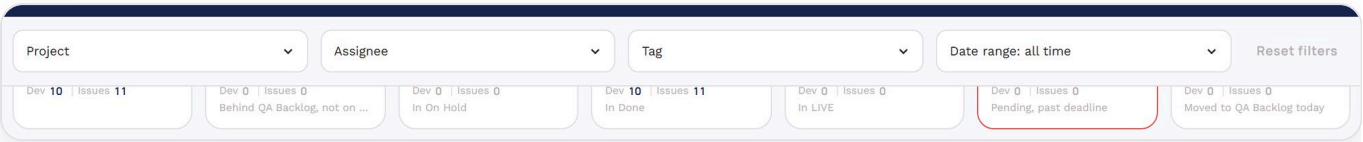

Page tools float on the right, as icons; hover any icon for its name.

Customise: choose the tiles and cards to show.
Guided tour: a walk through the page.
Guides: this guide and the Module guide.
Voice: read tours aloud.
Reset layout: back to the default, with Undo.

05 Reading the numbers

Tiles, cards, filters and drill-downs

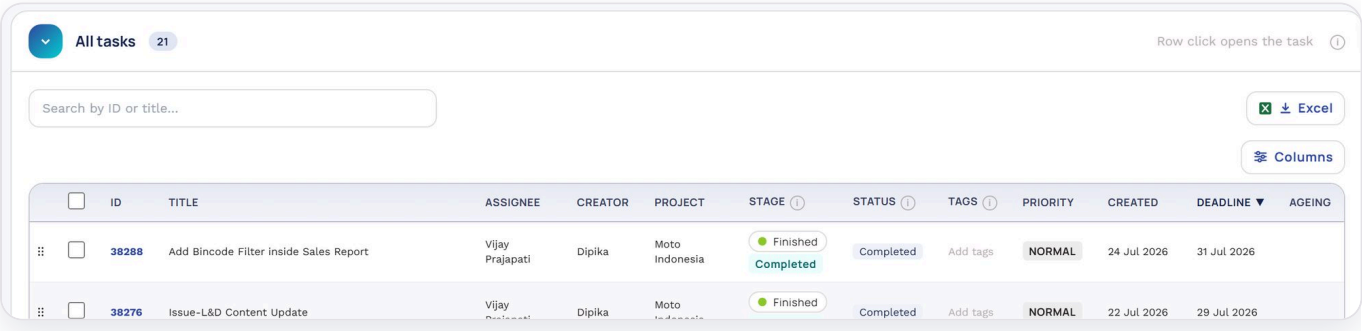

Tiles: one number each, split into parts (e.g. Dev and Issues). Click a tile or a part to list its tasks.

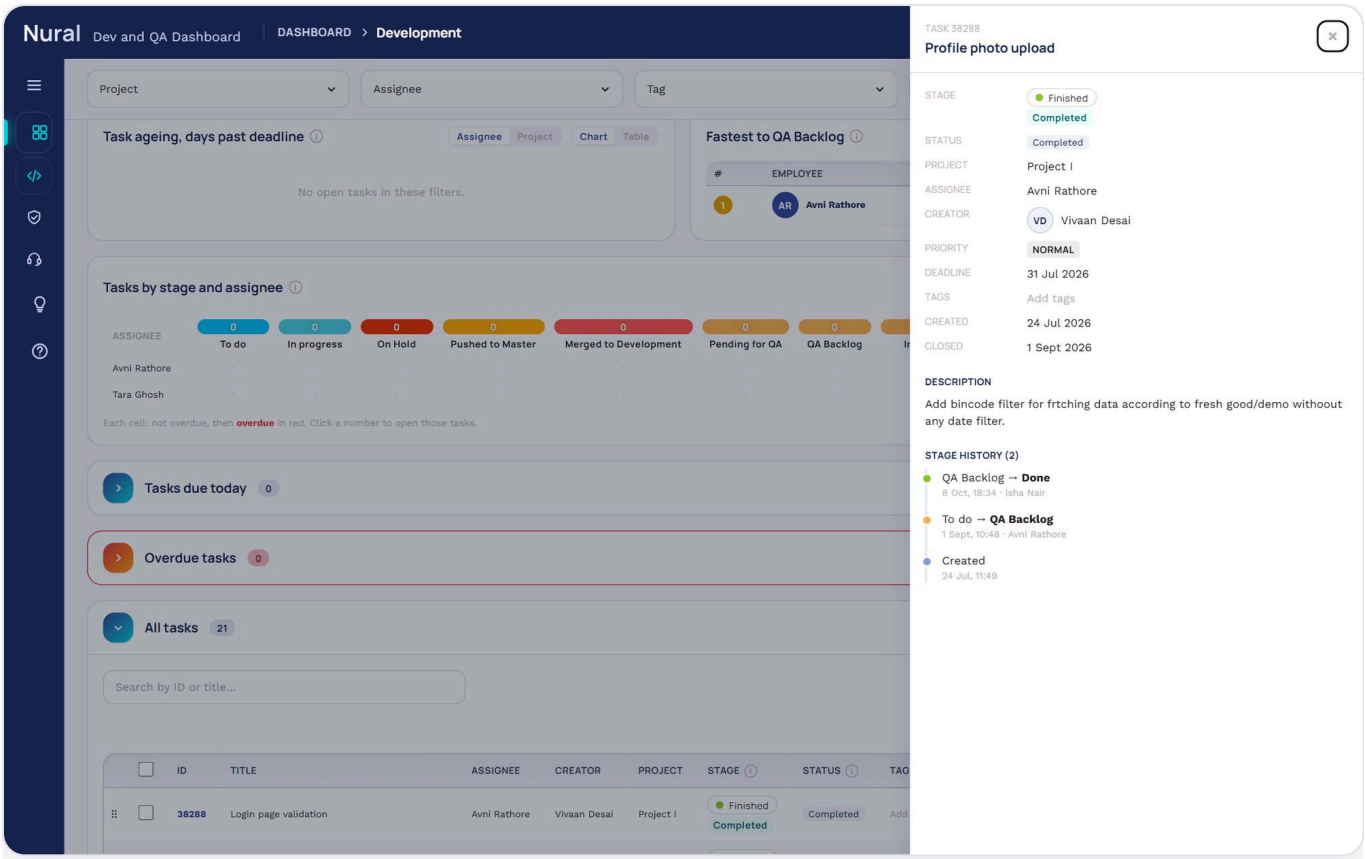

- **Filters** under the top bar (project, assignee, tag or bug/feedback, date range) narrow every number on the page. **Reset filters** clears them.
- The **i** next to any number says exactly what it counts, and what your filters cover.
- **Click any number**, bar or cell to see the tasks behind it: the page dims, the number stays lit and its list opens in the middle of the screen. Escape or ✕ puts it back.
- **Switches** at the top (Day / Week / Month, All / Dev / Issues, 7 / 14 / 30 days) change only some data points; the guided tour lights up exactly which.

One number, two places. The same data point can show a different number on two pages, because each counts within its own department or group: Development counts the Development department, QA the bugs and feedback, KPI the whole company, Insights the period you chose. Click the number to see exactly which tasks it counts.

Your scope. Every number, list, chart and export counts **only your own tasks**: those assigned to you or created by you.

A task list: sortable columns, edit in place, tick boxes for bulk edit, Excel export and pages of 10 to 100 rows.

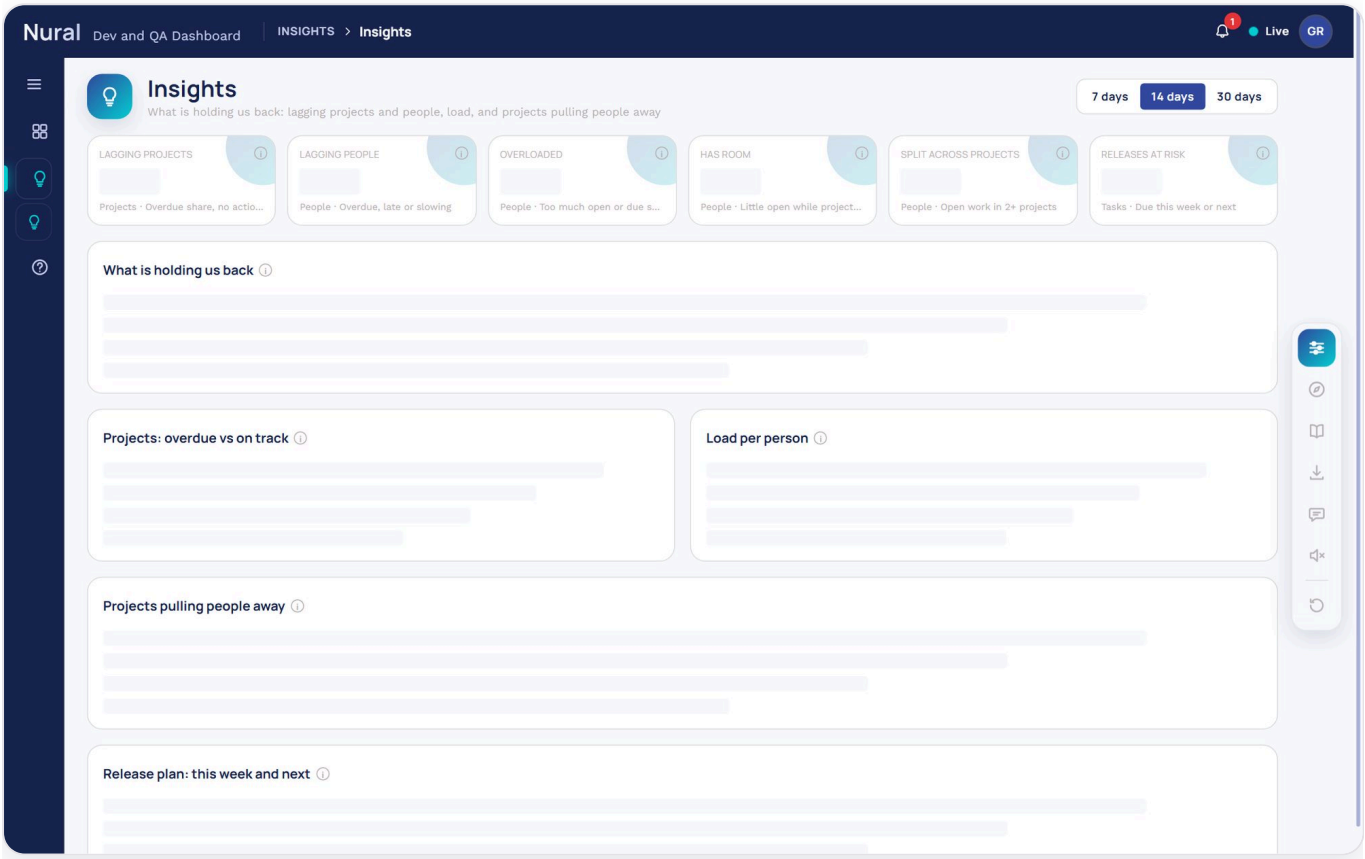

Clicking a task opens its view: every detail, the description and its history, with Open in Bitrix24.

06 Insights

What is holding us back

My insights looks at your own tasks: what is overdue, what is due soon, and where your work is split across projects.

- Choose the period (7, 14 or 30 days) at the top.
- Every finding names its numbers; **click it** to list the tasks behind it.
- Leave and attendance from Infowan join the findings once Infowan is connected; until then Insights uses Bitrix24 and dashboard data only.

My insights, as you see it (names replaced).

07 Changing tasks

Edit in place and in bulk

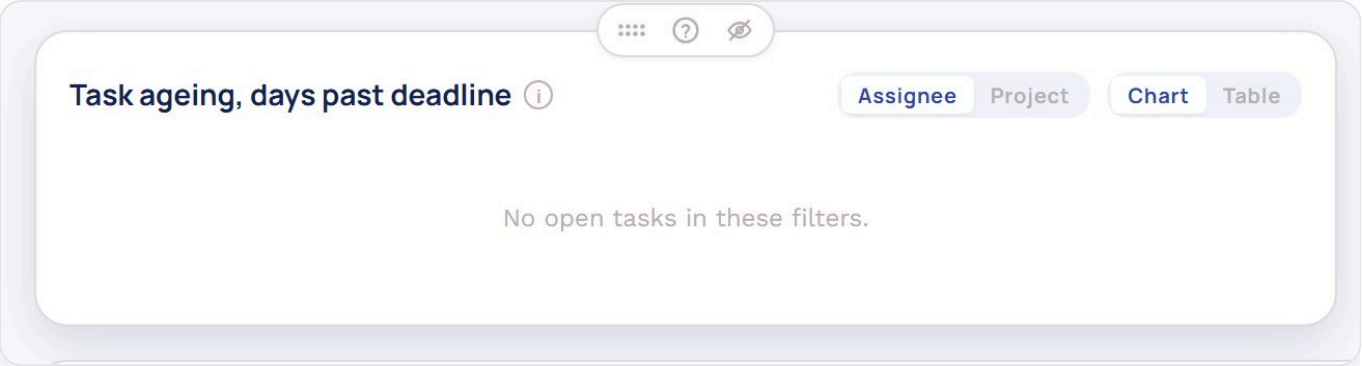

Changes are made in Bitrix24, in your name, and show on the dashboard straight away. You can change the stage, status and tags of your tasks.

- **Edit in place**: click a Stage, Status or Tags cell (or a fact in the task view) and pick the new value.
- **Bulk edit**: tick rows (or the header box for the whole list), choose what to change, then **Check**. Rows that cannot take the change turn red with the reason; **Apply** changes the rest. Up to 100 tasks at a time.
- **Excel**: every list downloads as it is filtered and sorted.

> **Bitrix24 decides.** If Bitrix24 refuses a change (for example, no rights on that task), the dashboard says why and nothing changes.

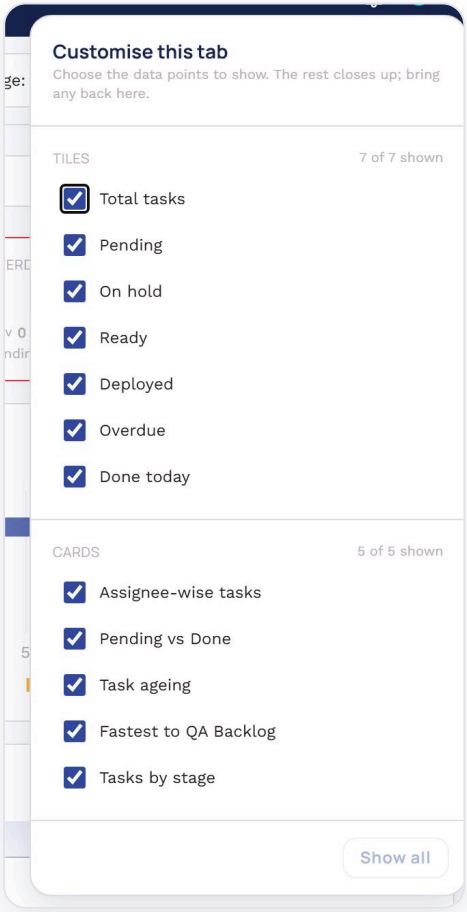

08 Make it yours

Arrange, hide, focus and export

Hover any tile, card or list: ⠿ moves it, ? explains it, the eye hides it.

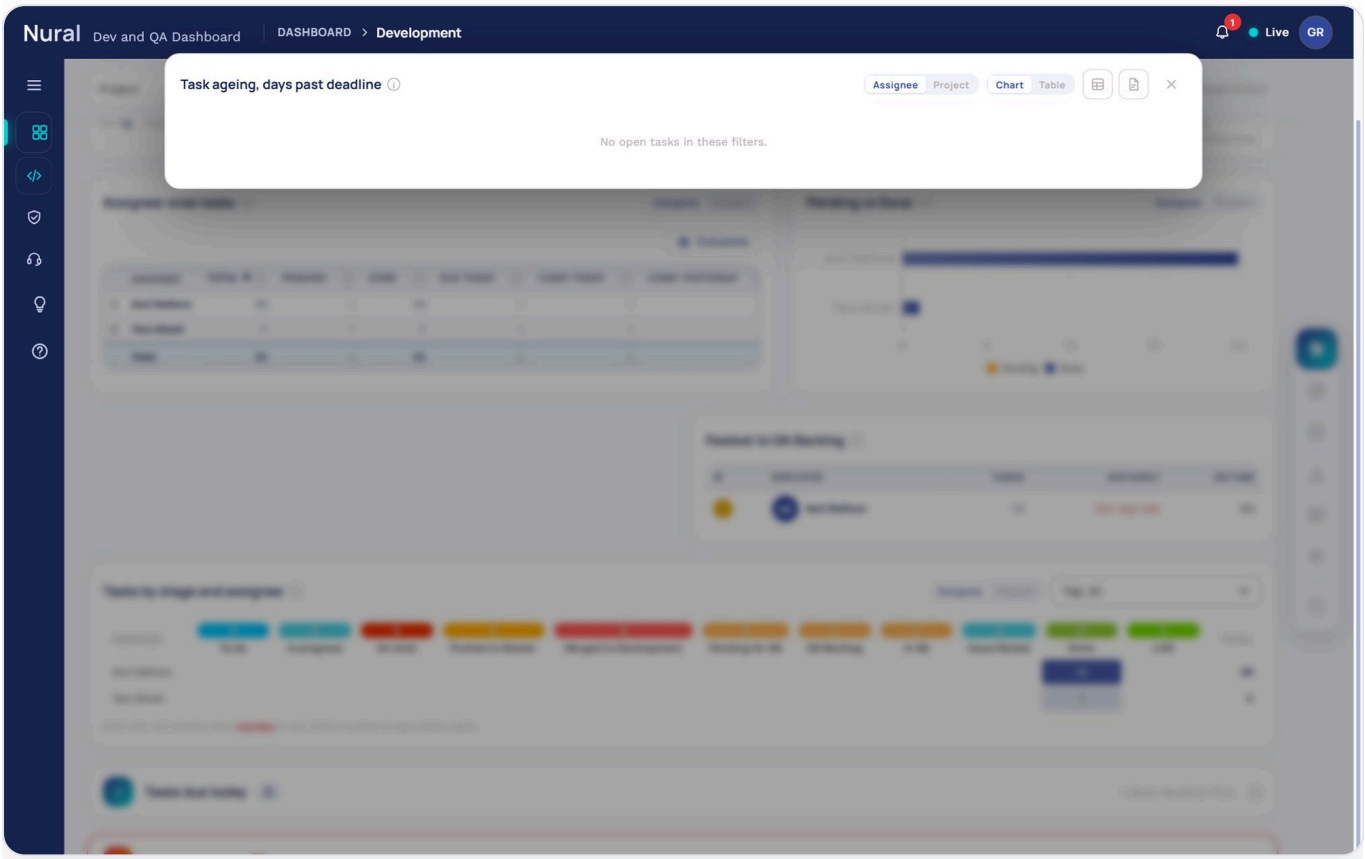

- **Drag** by ⠿ to put tiles, cards and lists in your order. Each stays in its own group, and cards resize to fill their row: drop a half-width card next to a full one and both become half.
- **Hide** a tile or card with the eye; bring it back with **Customise**. Task lists cannot be hidden.
- **Tables**: **Columns** chooses and orders the columns (or drag a column header); drag a row by ⠿ to put rows in your own order (**Your order**). Excel files follow your columns and order.
- **Export page** in the page tools: every data point on the page as one Excel workbook or a PDF.
- Your layout is saved for you and follows you to any computer. **Reset layout** puts everything back.

Customise: tick the tiles and cards to show on this page.

Focus view and export

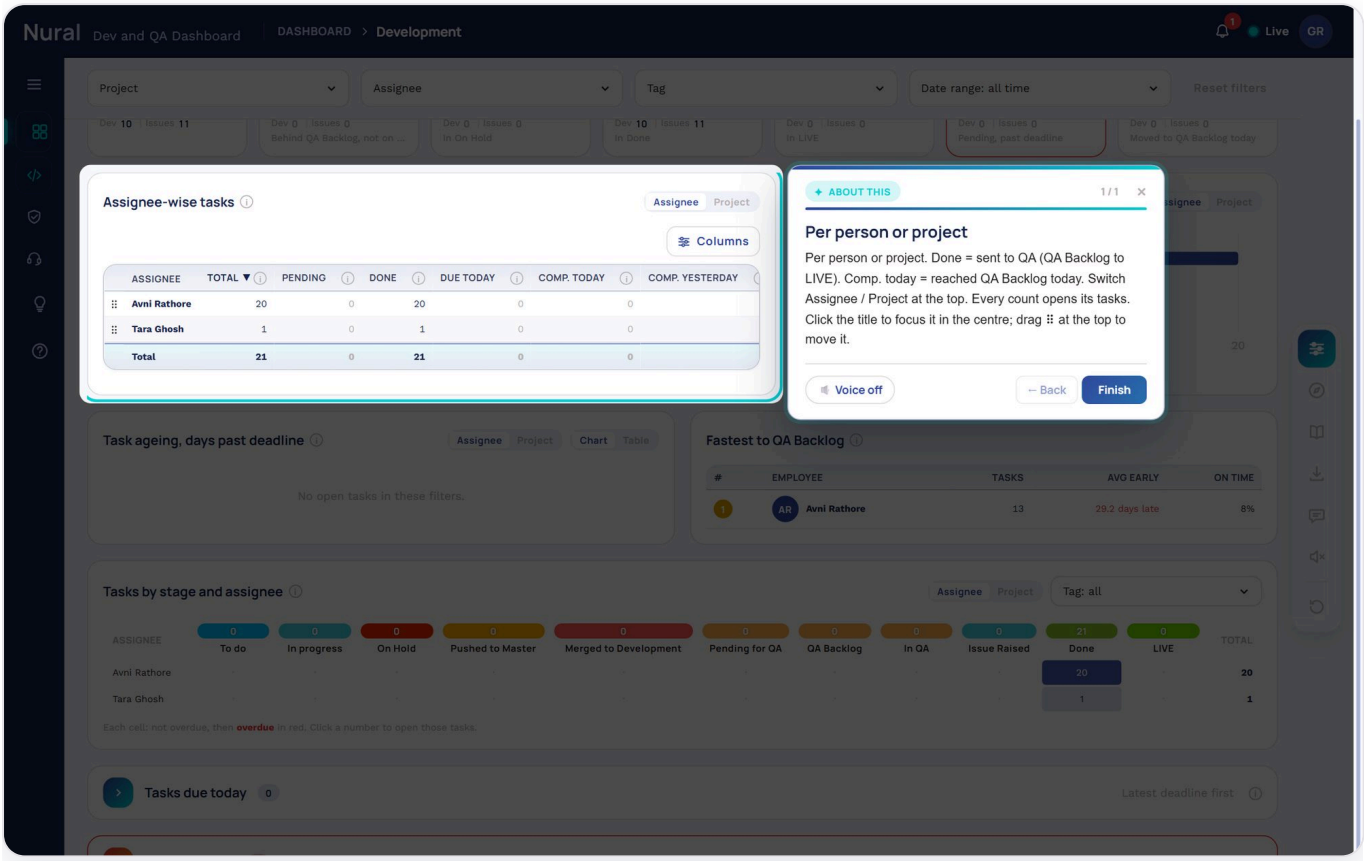

Click a card's title (or an empty part of it) to bring it to the centre, larger, with the page blurred behind. Then **Excel** exports that card's data, and **PDF** saves a picture of the whole card with the filters and time on it. Press Escape or click outside to put it back.

Focus view: one card in the centre, with Excel, PDF and close.

09 Guided tour and what's new

Let the dashboard show you around

A tour bubble next to the part it explains, with a step count, Back / Next and Voice.

- On your **first three sign-ins** each page explains itself when you open it: your role first, then every tile, card and list you can see. The last step offers the next page.
- Any time: the **Guided tour** icon on the right, or **?** on a single data point.
- **Voice**: turn it on to hear each step read aloud (browser voice; Edge sounds most natural).
- **What's new**: after an update, the refresh toast lists the changes, the page with something new gets a dot, and opening it walks you through.

10 Your pages at a glance

See the Module guide for every data point

Development

The Development department's tasks and issues: totals, pending, on hold, ready, deployed, overdue, done today; per person or project, ageing, ranking and stages; task lists and alerts.

QA

Bugs and feedback: filed, open, on hold, last filed and resolved, rework and retesting awaited; by person, rework, testing workload, retest queue, trend, ageing and stages.

Support

Coming soon. Tell us what the Support tab should show; your answers shape it.

Insights

What is holding us back: lagging projects and people, overload, people with room to help, projects pulling people off others, and releases at risk. Every finding opens its tasks.

Feedback

Tell us about an issue or idea: about the dashboard, a page, a project or a person, with screenshots, PDF, Excel or Word files. Follow your own; the inbox reads everyone's.

Documents

These guides to download: the whole dashboard, or one page at a time.

FAQs

Answers to the questions people ask most, by topic, with search.

11 Help

Common questions

A number looks different from Bitrix24

Check the filters at the top and the switch (All, Dev, Issues); the **i** says what each number counts. You see only your own tasks. Changes arrive within seconds; if Live is not green, refresh.

I cannot change a task

You can change the stage, status and tags of your tasks. Other fields are for team leads, PM and admins. If Bitrix24 refuses, the message says why. Signing out and in again picks up new Bitrix24 permissions.

I was signed out

Sessions last 3 days from sign-in. Sign in again from the page that opens.

I need a page I do not see

Pages follow your rights. Ask a dashboard admin.

My layout looks odd

Use **Reset layout** in the page tools on the right.

> **Still stuck?** Ask a dashboard admin, or use the Support page to tell us.
